Extreme Simon README

Extreme Simon is a VR Concert Simulator game. You will play as a stage production manager backstage at a concert, where you have to push buttons specified by the screen in front of you (similar to the classic Simon game), and if you do them in the correct order, the concert will go smoothly, however, if you mess up there will be an explosion onstage and you lose the game.

How To Play

The game is played on the Oculus Quest VR headset. The Quest handheld controllers are used for the player's controls, and the camera is moved with the user's head movements in the headset.

Inside the stage, there is a start button to the left, and the four colored playing buttons directly in front. Once you are ready to play, use the controller to physically push down on the start button. During the game, the screen in front of the stage will flash an increasingly complex series of colors. After the sequence flashes, press the colored buttons in the same order they flashed on the screen. If you get the correct sequence, the sequence repeats with added complexity, if you get it incorrect, then you receive a strike and get the chance to try again.

If you successfully match all sequences, then you get to move on to the next level, if you don't, then you lose and the stage will explode.
